

# Virginia Long-Term Care Clinician Network Monthly Forum

December 18, 2024

# Welcome!

As you join, please turn on cameras and mic or unmute your phone and say hello to your Virginia colleagues. We all have a common bond: the choice to serve in a unique area of health care.

## Please use the chat box:

- Your name, practice and areas of practice
- Best wishes for some restful days over the next month!

## Chat Waterfall

*In Chat, respond to the question below, but don't hit the send button yet! Wait for the countdown...*

How does your team, if you have one, do workday scheduling? Do you self schedule, a non clinical person make a schedule, texts to colleagues seeking coverage, etc.?

**Jones Run Falls about an hour  
from  
Waynesboro VA**

# Diabetes Update in PALTC

## GLP-1 Agonists and Continuous Glucose Monitoring

Carl J. "Christian" Bergman, MD, CMD, FACP, AGSF  
Associate Professor, Division of Geriatric Medicine, VCU

I have no relevant conflicts of interest.

## DIABETES MANAGEMENT

in the Post-Acute and Long-Term Care Setting

August 2024

[https://paltmed.org/sites/default/files/2024-08/Diabetes\\_Text-August22-2024.pdf](https://paltmed.org/sites/default/files/2024-08/Diabetes_Text-August22-2024.pdf)

[https://www.endocrinepractice.org/issue/S1530-891X\(22\)X0008-6#](https://www.endocrinepractice.org/issue/S1530-891X(22)X0008-6#)

# Diabetes in PALTC Background

- Annual cost of diagnosed diabetes in US (2022) was \$413 billion (direct and indirect)
  - Has increased by 35% between 2012 and 2022.
- Prevalence of diabetes in PALTC 25-34%
- Independent predictor of placement in nursing home or assisted living
- Unclear treatment goals in this patient population
- High rate of co-morbid conditions

# Key Recommendations

- Avoid prescribing restrictive diets
- Avoid strict adherence to low A1C numbers
- Avoid sliding scale insulin
- Consider newer oral agents (DPP4, SGLT2)
- Consider newer injectable GLP1 analogs

DPP-4, dipeptidyl peptidase 4; GLP1-RA, glucagon-like 1 receptor agonist; SGLT2, sodium glucose transporter 2 Sources: Evans et al, 2022; Karagiannis et al, 2022; Le et al, 2022; Lipska, et al, 2015; Miller et al, 2022; Pandya et al, 2023; Remelli et al, 2022; Thomas et al, 2021; Umpierrez & Klonoff, 2018 (References from PALTmed Diabetes CPG)

# Fasting – Religious vs. Intermittent

**Table 5.5—Changes in medications during fasting**

Medication name	Risk of hypoglycemia	Timing	Total daily dose
Metformin, SGLT2 inhibitor, DPP-4 inhibitor, GLP-1 receptor agonist, acarbose, or pioglitazone	Low	<ul style="list-style-type: none"> <li>• If once daily, then take at main mealtime.</li> <li>• If twice daily, then split dose between the two meals.</li> <li>• If once weekly, no change of time.</li> </ul>	<ul style="list-style-type: none"> <li>• No change</li> </ul>
New generation sulfonylurea (glimepiride and gliclazide)	Low to moderate	<ul style="list-style-type: none"> <li>• If once daily, then take at main mealtime.</li> <li>• If twice daily, then split dose between the two meals.</li> </ul>	<ul style="list-style-type: none"> <li>• Reduce dose if glucose levels are within individualized goal range and if no hypoglycemia or hyperglycemia is present at baseline.</li> </ul>
Older generation of sulfonylurea (glyburide)	Moderate to high	<ul style="list-style-type: none"> <li>• Take at time of main meal</li> </ul>	<ul style="list-style-type: none"> <li>• Replace with newer-generation sulfonylurea or reduce dose by 50%.</li> </ul>
Basal insulin	Moderate to high	<ul style="list-style-type: none"> <li>• For longer-acting basal analogs (glargine 300 or degludec), no need to change timing.</li> <li>• For other basal insulins, take at beginning of breaking fast meal.</li> </ul>	<ul style="list-style-type: none"> <li>• Choose the insulin with lower risk of hypoglycemia among the class.</li> <li>• Reduce dose by 25–35% if not well managed.</li> </ul>
Prandial insulin	High	<ul style="list-style-type: none"> <li>• At mealtime</li> </ul>	<ul style="list-style-type: none"> <li>• Reduce dose of insulin for the meal followed by fasting (35–50%).</li> <li>• For other meals, insulin dose should match carbohydrate intake.</li> </ul>
Mixed insulin and insulin coformulations	High	<ul style="list-style-type: none"> <li>• If once daily, then take at main mealtime.</li> <li>• If twice daily, then split dose between the two meals</li> </ul>	<ul style="list-style-type: none"> <li>• Reduce dose of insulin for the meal followed by fasting (35–50%).</li> <li>• For other meals, no change of dose.</li> </ul>

DPP-4, dipeptidyl peptidase 4; GLP-1, glucagon-like peptide 1; SGLT2, sodium–glucose cotransporter 2.

# Metabolic Dysfunction-Associated Steatotic Liver Disease (MASLD) Treatment Algorithm

\*Individualized care and close monitoring needed in compensated cirrhosis given limited safety data available.

**Figure 4.3**—Metabolic dysfunction–associated steatotic liver disease (MASLD) treatment algorithm. F0-F1, no to minimal fibrosis; F2-F3, moderate fibrosis; F4, cirrhosis; GIP, glucose-dependent insulinotropic polypeptide; GLP-1 RA, glucagon-like peptide 1 receptor agonist; MASH, metabolic dysfunction–associated steatohepatitis; SGLT2i, sodium–glucose cotransporter 2 inhibitor.

# Individualized A1C Goals

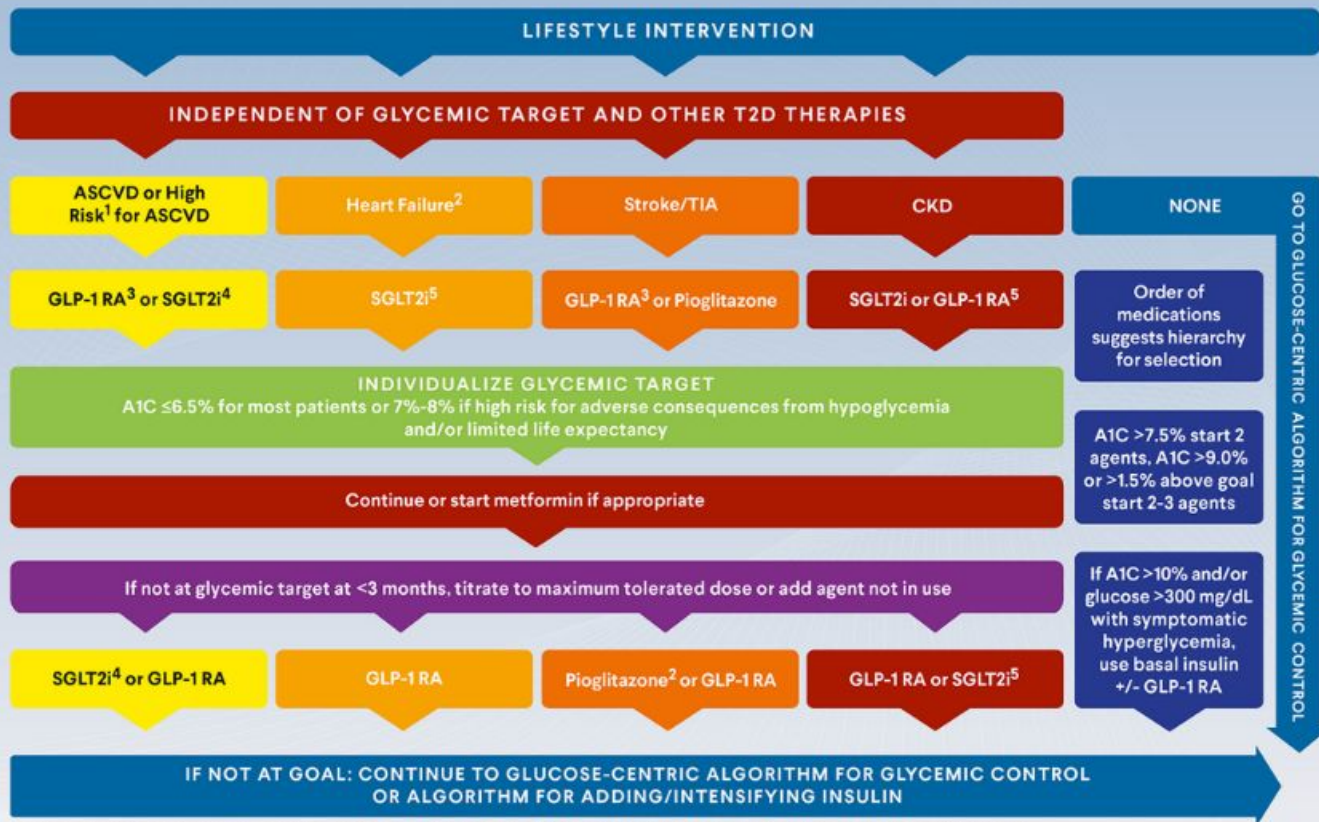

Modifying Factors

Favor more stringent goal	Favor less stringent goal
Short diabetes duration	Long diabetes duration
Low hypoglycemia risk	High hypoglycemia risk
Low treatment risks and burdens	High treatment risks and burdens
Pharmacotherapy with cardiovascular, kidney, weight, or other benefits	Pharmacotherapy without nonglycemic benefits
No cardiovascular complications	Established cardiovascular complications
Few or minor comorbidities	Severe, life-limiting comorbidities

[https://diabetesjournals.org/care/issue/48/Supplement\\_1](https://diabetesjournals.org/care/issue/48/Supplement_1)

# COMPLICATIONS-CENTRIC ALGORITHM FOR GLYCEMIC CONTROL

[https://www.endocrinepractice.org/issue/S1530-891X\(22\)X0008-6#](https://www.endocrinepractice.org/issue/S1530-891X(22)X0008-6#)

<sup>1</sup>High risk for ASCVD: albuminuria or proteinuria, hypertension and left ventricular (LV) hypertrophy, LV systolic or diastolic dysfunction, ankle-brachial index <0.9.  
<sup>2</sup>TZDs are contraindicated in NYHA Class III/IV HF. <sup>3</sup>ASCVD: liraglutide/semaglutide/dulaglutide or Stroke: semaglutide/dulaglutide.  
<sup>4</sup>canagliflozin/empagliflozin. <sup>5</sup>Use SGLT2i or GLP-1 RA with proven benefit.

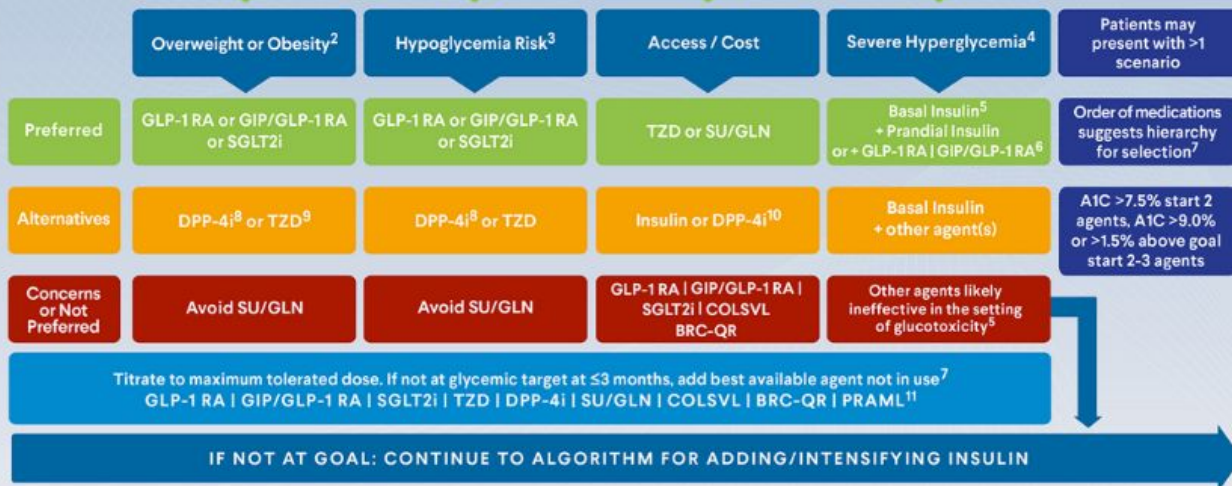

# GLUCOSE-CENTRIC ALGORITHM FOR GLYCEMIC CONTROL

## LIFESTYLE INTERVENTION

Start or continue metformin if appropriate<sup>1</sup>

## INDIVIDUALIZE GLYCEMIC TARGET

A1C  $\leq$ 6.5% for most persons or 7%-8% if high risk for adverse consequences from hypoglycemia and/or limited life expectancy

<sup>1</sup>Take with food with dose titration for enhanced tolerance. <sup>2</sup>See also COMPLICATIONS-CENTRIC MODEL FOR THE CARE OF PERSONS WITH OVERWEIGHT/OBESITY and PROFILES OF WEIGHT-LOSS MEDICATIONS table. <sup>3</sup>Evaluate for issues leading to hypoglycemia or hypoglycemia unawareness and manage with patient-centered strategies. <sup>4</sup>If A1C >10% and/or BG  $\geq$ 300 with symptomatic hyperglycemia, reduce glucose/A1C as promptly and safely as possible. <sup>5</sup>See also ALGORITHM FOR ADDING/INTENSIFYING INSULIN. <sup>6</sup>GLP-1 RA requires titration phase which can delay glycemic control. After glucose toxicity is resolved, consider adding other agents. <sup>7</sup>See also PROFILES OF ANTIHYPERGLYCEMIC MEDICATIONS table. <sup>8</sup>GLP-1 RA and DPP-4i should not be combined. <sup>9</sup>TZD can cause fluid retention but have benefit for NAFLD, CVD prevention, dyslipidemia. <sup>10</sup>Access/Cost are dependent on location of the market. Insulin costs vary widely with devices (e.g., pens versus vials) and formulations (e.g., analogues versus combinations such as 70/30). <sup>11</sup>PRAML is used as an adjunct with prandial insulin.

Algorithm Figure 7-Glucose-Centric Glycemic Control

[https://www.endocrinepractice.org/issue/S1530-891X\(22\)X0008-6#](https://www.endocrinepractice.org/issue/S1530-891X(22)X0008-6#)

Poll Question:

Are you routinely using GLP-1RA in your PALTC practice?

Yes

No

# Glucose Lowering Medications in T2DM

- SGLT-2 inhibitors
  - mechanism: SGLT2 inhibitors inhibit the coupled reabsorption of sodium and glucose from the proximal tubules, thereby increasing renal glucose and sodium excretion
  - intermediate/high efficacy, no risk of hypoglycemia, benefit for wt loss, MACE, HF, CKD
  - possible DKA risk, necrotizing fasciitis of perineum, higher UTI/urogenital infections, volume depletion/dehydration
  - **canagliflozin (Invokana) PO, dapagliflozin (Farxiga) PO, empagliflozin (Jardiance) PO**
- GLP-1RA
  - mechanism: GLP-1 receptor agonists work by mimicking the action of GLP-1, it regulates blood sugar levels by stimulating insulin secretion, inhibiting glucagon release, and slowing gastric emptying
  - high efficacy, no hypoglycemia risk, weight loss benefit high, benefit for MACE, neutral in HF, benefit in CKD
  - concerns: thyroid cancer, ileus, pancreatitis, gallbladder disease, diabetic retinopathy, decreased drug absorption, GI side effects (not for gastroparesis pts)
  - **exenatide (Byetta) BID IM, liraglutide (Victoza) qD IM, dulaglutide (Trulicity) qW IM, semaglutide (Ozempic) qW IM, tirzepatide (Mounjaro) qW IM**
- DPP-4i
  - mechanism: block DPP-4 from inactivating GLP-1 thus, increasing incretin levels (GLP-1 and GIP), which inhibit glucagon release, which in turn increases insulin secretion, decreases gastric emptying, and decreases blood glucose levels
  - intermediate efficacy, no risk of hypoglycemia, neutral benefit weight loss, MACE, HF, CKD
  - concerns: pancreatitis, joint pain, bullous pemphigoid
  - **linagliptin (Trajenta) PO, saxagliptin (Onglyza) PO, sitagliptin (Januvia) PO**

**Goal: Cardiovascular and Kidney Risk Reduction in High-Risk Individuals with Type 2 Diabetes\***

**+ASCVD<sup>†</sup>**

**+Indicators of high CVD risk**

**+HF**

Current or prior symptoms of HF with documented HFrEF or HFpEF

**+CKD**

eGFR <60 mL/min/1.73 m<sup>2</sup> OR albuminuria (ACR ≥3.0 mg/mmol [30 mg/g]). Repeat measurement is required to confirm CKD

**+ASCVD/indicators of high CVD risk\***

GLP-1 RA<sup>#</sup> with proven CVD benefit

**OR**

SGLT2i<sup>#</sup> with proven CVD benefit

**SGLT2i<sup>#</sup>**

with proven HF benefit in this population

**+CKD (on maximally tolerated dose of ACEi or ARB)**

SGLT2i<sup>#</sup> with primary evidence of reducing CKD progression

- SGLT2i can be started with eGFR ≥20 mL/min/1.73 m<sup>2</sup>
- Continue until initiation of dialysis or transplantation
- Glucose-lowering efficacy is reduced with eGFR <45 mL/min/1.73 m<sup>2</sup>

**OR**

GLP-1 RA<sup>#</sup> with proven CKD benefit

If A1C is above goal, for individuals on SGLT2i, consider incorporating a GLP-1 RA or vice versa

**If A1C is above goal**

- For individuals on a GLP-1 RA, consider adding SGLT2i with proven CVD benefit or vice versa
- Pioglitazone<sup>^</sup>

**Goal: Achievement and Maintenance of Weight and Glycemic Goals**

**+Weight management**

**Efficacy for weight loss**

**Very high:**  
Semaglutide, tirzepatide

**High:**  
Dulaglutide, liraglutide

**Intermediate:**  
GLP-1 RA (not listed above), SGLT2i

**Neutral:**  
Metformin, DPP-4i

**+Achievement and maintenance of glycemic goals**

Metformin or other agent (including combination therapy) that provides adequate EFFICACY to achieve and maintain glycemic treatment goals

Prioritize avoidance of hypoglycemia in high-risk individuals

**Efficacy for glucose lowering**

**Very high:**

Dulaglutide (high dose), semaglutide, tirzepatide, insulin  
Combination oral, combination injectable (GLP-1 RA and insulin)

**High:**

GLP-1 RA (not listed above), metformin, pioglitazone, SGLT2i, sulfonylurea

**Intermediate:**

DPP-4i

# Glucose Lowering Medications in T2DM

**Table 9.3—Median monthly (30-day) AWP and NADAC of maximum approved daily dose of noninsulin glucose-lowering agents in the U.S.**

Class	Compound	Dosage strength/ product (if applicable)	Maximum approved daily dose†	Median AWP (min, max)*	Median NADAC (min, max)*
SGLT2 inhibitors	• Bexagliflozin	20 mg	20 mg	\$47	NA
	• Canagliflozin	300 mg	300 mg	\$718	\$574
	• Dapagliflozin	10 mg	10 mg	\$664	\$352
	• Empagliflozin	25 mg	25 mg	\$733	\$586
	• Ertugliflozin	15 mg	15 mg	\$428	\$343
GLP-1 RAs	• Dulaglutide	4.5 mg pen	4.5 mg‡	\$1,173	\$941
	• Exenatide	10 mg pen	20 mg	\$1,020	\$818
	• Exenatide (ER)	2 mg pen	2 mg‡	\$993	\$1,101
	• Liraglutide	18 mg/3 mL pen	1.8 mg	\$929	\$1,077
	• Semaglutide	2 mg pen	2 mg‡	\$1,162	\$933
		14 mg (tablet)	14 mg	\$1,162	\$933
DPP-4 inhibitors	• Alogliptin	25 mg	25 mg	\$234	\$145
	• Linagliptin	5 mg	5 mg	\$630	\$503
	• Saxagliptin	5 mg	5 mg	\$524 (\$523, \$524)	\$165
	• Sitagliptin	100 mg	100 mg	\$588	\$550

# Facility Approach to Diabetes

- Clarify roles of staff members (RN/LPN, CNA, Dietician, SW, PT/OT/SLP, etc.)
  - Change of Condition, Care of equipment, care transitions, psychosocial assessment, nutritional management, fall risk, oral care, etc.
- Staff education (ex: CGM and s/s of hypo-/hyper-glycemia)
- For all patients (review glucose trends, review meds, assessment of eyes/feet/mouth/skin, collaborate with dietician, education pts/families)
- Track facility-wide quality metrics

# Clinical Care across PALTC Continuum

**TABLE 12. Clinical Care Considerations Across the PALTC Continuum**

LONG-TERM CARE			ALF
SKILLED REHAB	LTC	HOSPICE/PALLIATIVE	
Avoid reliance on A1C BG target 100–200 mg/dL (5.5–11.1 mmol/L) Potential for discharge Cognitive impairment Expressed wishes of patient Self care and function Community support	Avoid reliance on A1C Avoid hypoglycemia and symptomatic hyperglycemia Goals of care Cognitive impairment Glycemic goals Complications and comorbidities	Avoid hypoglycemia and symptomatic hyperglycemia Goals of care Clinical complexity Comfort Wishes of patient and family	Avoid hypoglycemia A1C below 8% if feasible Complications and comorbidities Cognition Functional ability Staffing capability BG monitoring/injections
<b>ASSESS ALL PATIENTS FOR THE FOLLOWING:</b> <ul style="list-style-type: none"> <li>■ Hypoglycemic risk</li> <li>■ Renal function</li> <li>■ CV risks and complications</li> <li>■ Weight loss</li> <li>■ Frailty</li> <li>■ Prognosis</li> </ul>			

ALF, assisted living facility; BG, blood glucose; CV, cardiovascular; LTC, long-term care

# Caveats/Cautions

**TABLE 17. Additional Caveats and Cautions When Prescribing Diabetes Medications in PALTC**

Medication	When to Avoid
<b>Metformin</b>	Decompensated HF eGFR less than 30 Hepatic disease Risk of dehydration If patient has diarrhea, consider ER formulation or alternative agent
<b>GLP1-RA</b>	Anorexia Chronic constipation Gastroparesis or other motility issues Unexplained GI symptoms Weight loss Preferred in presence of ASCVD or HF
<b>SGLT2 inhibitor</b>	Acute kidney injury Bedbound status Dehydration Dialysis Fractures Frequent UTI or genital yeast infection Inability to drink fluids independently Urinary incontinence Weight loss Stop 5 d prior to elective procedure Preferred in presence of CKD or HF
<b>DPP-4 inhibitor</b>	Severe anorexia Unexplained GI symptoms Do not use with concurrent GLP1-RA

<b>Basal insulin</b>	Hypoglycemia risk Injectable treatments not possible in care setting (e.g., some ALFs) Inconsistent BG monitoring Lack of caregiver support Stop sulfonylureas, SSI
<b>Prandial insulin</b>	Erratic meal consumption Hypoglycemia risk Injectable treatments not possible in care setting Inconsistent BG monitoring Lack of caregiver support Tube feeding Stop sulfonylureas, SSI
<b>Sulfonylureas</b>	Concurrent insulin use Dementia Hypoglycemia risk
<b>TZDs</b>	Bladder cancer HF or other edema Osteoporosis

ALF, assisted living facility; ASCVD, atherosclerotic cardiovascular disease; BG, blood glucose; CKD, chronic kidney disease; DPP-4, dipeptyl peptidase 4; eGFR, estimated glomerular filtration rate; ER, extended release; GI, gastrointestinal; GLP1-RA, glucagon-like peptide-1 receptor agonist; HF, heart failure; SGLT2, sodium glucose transporter 2; SSI, sliding-scale insulin; UTI, urinary tract infection

# Dealing with SSI

**TABLE 20.** Strategies for Replacing Sliding-Scale Insulin in PALTC Facilities

Current Regimen or Clinical Scenario	Suggested Steps
<b>SSI is sole mode of insulin treatment</b>	<ul style="list-style-type: none"> <li>■ Give 50%–75% of the average daily insulin requirement over 5–7 d as basal insulin</li> <li>■ Stop SSI</li> <li>■ Use non-insulin agents or fixed-dose meal-time insulin for PPG as needed</li> <li>■ Consider giving basal insulin in morning to reduce PPG and nocturnal hypoglycemia</li> </ul>
<b>SSI is used in addition to scheduled basal insulin</b>	<ul style="list-style-type: none"> <li>■ Add 50%–75% of the average insulin requirement currently given as SSI to the existing basal dose</li> <li>■ Use non-insulin agents or fixed-dose meal-time insulin for PPG as needed</li> </ul>
<b>SSI is used in addition to basal and scheduled mealtime insulin (i.e., correction dose insulin)</b>	<ul style="list-style-type: none"> <li>■ If a correction dose is frequently required, add the average correction dose before a meal to the scheduled mealtime insulin dose at the <i>preceding</i> meal</li> <li>■ If BG is consistently elevated before breakfast, requiring correction doses, increase the scheduled basal insulin dose by the average correction dose used</li> </ul>

<b>SSI is used short term due to illness or irregular dietary intake</b>	<ul style="list-style-type: none"> <li>■ Short-term SSI use is <i>appropriate</i> in cases of acute illness and irregular dietary intake</li> <li>■ As health and BG stabilize, stop SSI, return to previous regimen as tolerated, and reduce monitoring frequency</li> </ul>
<b>Patient with cognitive decline or irregular dietary intake has widely fluctuating BG levels</b>	<ul style="list-style-type: none"> <li>■ Use scheduled basal and meal-time insulin based on individual needs with the goal of avoiding low BG</li> <li>■ Consider using a simple scale such as “Give 4 units of prandial insulin if BG is higher than 300 mg/dL”</li> <li>■ Keep patients hydrated when glucose levels are higher than 300 mg/dL</li> </ul>

BG, blood glucose; PPG, postprandial glucose; SSI, sliding-scale insulin

Adapted from Munshi, 2016

Poll Question:

Have you started using CGM for your LTC or AL patients?

Yes

No

# Continuous Glucose Monitoring

The use of CGM technology offers several potential advantages in the PALTC setting, including

- Reducing staff time spent monitoring patients' blood glucose levels
- Detecting hypoglycemia (especially nocturnal hypoglycemia)
- Detecting glucose variability (i.e., fluctuations in blood glucose control throughout the day)
- Enabling online monitoring of the blood glucose levels of multiple patients in different parts of the facility
- Facilitating close monitoring of glucose levels in very sick patients on room isolation
- Reducing the burden of fingersticks in patients at the end of life

However, facilities' ability to use this technology depends on factors such as

- Facility characteristics (e.g., level of care, staff clinical competency, staffing shortages)
- Clinician knowledge of and familiarity with diabetes technology
- Insurance coverage for CGM
- Patients' overall and glycemic-specific goals of care
- Presence of comorbidities and diabetes complications

Although studies of CGM in PALTC settings are scant, data from the few studies that have been conducted suggest that the technology can identify previously unrecognized hypoglycemia and may improve the detection of both hypo- and hyperglycemic events compared with point-of-care testing.

# Continuous Glucose Monitoring

**Table 7.3—Continuous glucose monitoring devices**

Type of CGM	Description
rtCGM	CGM systems that measure and display glucose levels continuously
isCGM with and without alarms	CGM systems that measure glucose levels continuously but require scanning for visualization and storage of glucose values
Professional CGM	CGM devices that are placed on the person with diabetes in the health care professional's office and worn for a discrete period of time (generally 7–14 days). Data may be blinded or visible to the person wearing the device. The data are used to assess glycemic patterns and trends. Unlike rtCGM and isCGM devices, these devices are clinic-based and not owned by the person with diabetes.
Over-the-counter CGM	CGM devices called biosensors, which measure glucose continuously and display the levels at various times, have insights rather than alarms and are indicated for people with prediabetes or with diabetes not on insulin.

CGM, continuous glucose monitoring; isCGM, intermittently scanned CGM; rtCGM, real-time CGM.

## AGP Report: Continuous Glucose Monitoring

Test Patient D OB: Jan 1, 1970  
 14 Days: August 8–August 21, 2021  
 Time CGM Active: 100%

**Glucose Metrics**

Average Glucose: **175 mg/dL**  
 Goal: <154 mg/dL

Glucose Management Indicator (GMI): **7.5%**  
 Goal: <7%

Glucose Variability: **45.5%**  
 Goal: <36%

Defined as percent coefficient of variation

### Ambulatory Glucose Profile (AGP)

AGP is a summary of glucose values from the report period, with median (50%) and other percentiles shown as if they occurred in a single day.

### Daily Glucose Profiles

Each daily profile represents a midnight-to-midnight period.

Figure 6.1—Key points included in a standard ambulatory glucose profile (AGP) report. Adapted from Holt et al. (20).

# CGM – Meter Accuracy

**Table 7.1—Comparison of ISO 15197:2013 and FDA blood glucose meter accuracy standards**

Setting	FDA*	ISO 15197:2013*
Hospital use	95% within 12% for BG $\geq$ 75 mg/dL	95% within 15% for BG $\geq$ 100 mg/dL 95% within 15 mg/dL for BG <100 mg/dL 99% in A or B region of consensus error grid‡
	95% within 12 mg/dL for BG <75 mg/dL	
	98% within 15% for BG $\geq$ 75 mg/dL	
	98% within 15 mg/dL for BG <75 mg/dL	
Home use	95% within 15% for all BG in the usable BG range† 99% within 20% for all BG in the usable BG range†	

BG, blood glucose; FDA, U.S. Food and Drug Administration; ISO, International Organization for Standardization. To convert mg/dL to mmol/L, see [endmemo.com/medical/unitconvert/Glucose.php](http://endmemo.com/medical/unitconvert/Glucose.php). \*Data shown in the FDA column are from the FDA (298). Data shown in the ISO column are from the FDA (299). †The range of blood glucose values for which the meter has been proven accurate and will provide readings (other than low, high, or error). ‡Values outside of the “clinically acceptable” A and B regions are considered “outlier” readings and may be dangerous to use for therapeutic decisions (300).

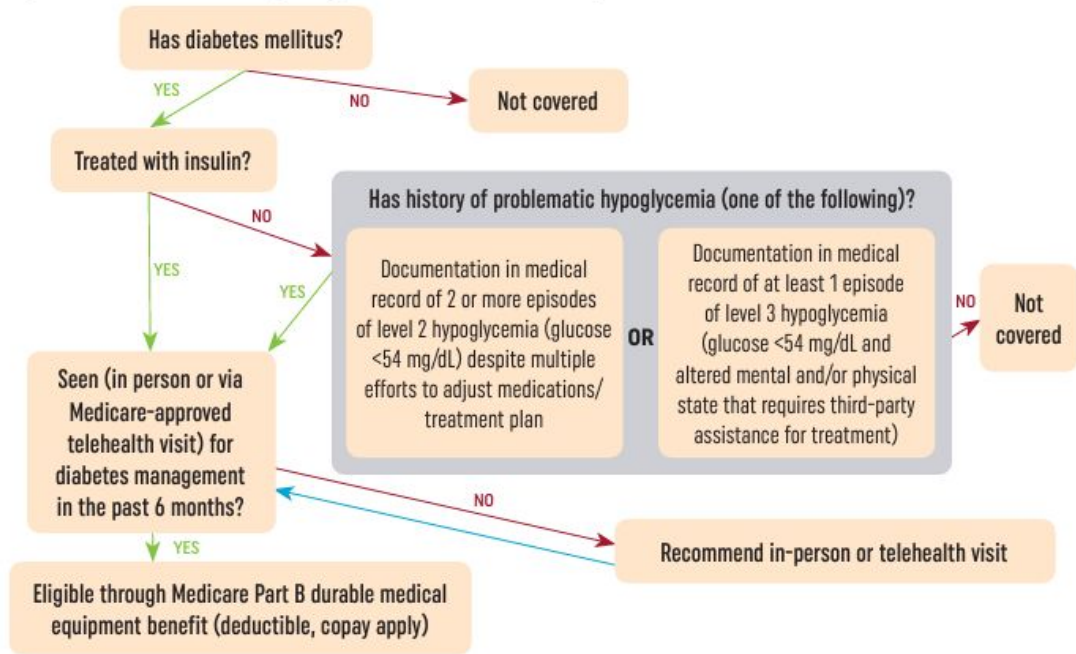

**Table 74—Continuous glucose monitoring device interfering substances**

Medication	Systems affected	Effect
Acetaminophen >4 g/day Any dose	Dexcom G6, Dexcom G7	Higher sensor readings than actual glucose
	Medtronic Guardian	Higher sensor readings than actual glucose
Ascorbic acid (vitamin C), >500 mg/day	FreeStyle Libre 14 day, FreeStyle Libre 2, FreeStyle Libre 3	Higher sensor readings than actual glucose
Ascorbic acid (vitamin C), >1,000 mg/day	FreeStyle Libre 2 Plus, FreeStyle Libre 3 Plus	Higher sensor readings than actual glucose
Hydroxyurea	Dexcom G6, Dexcom G7, Medtronic Guardian	Higher sensor readings than actual glucose
Mannitol (intravenously or as peritoneal dialysis solution)	Senseonics Eversense	Higher sensor readings than actual glucose
Sorbitol (intravenously or as peritoneal dialysis solution)	Senseonics Eversense	Higher sensor readings than actual glucose

# CGM – Medicare Coverage

Figure 1. Medicare CGM Eligibility Determination – 2023 Update

<https://www.aafp.org/pubs/fpm/issues/2024/0100/continuous-glucose-monitoring.pdf>

<https://www.aafp.org/family-physician/patient-care/care-resources/continuous-glucose-monitoring.html>

# CGM – Medicare Coverage

## Medicare Eligibility Requirements for Personal CGM

- Diagnosis of diabetes;
- Beneficiary (or beneficiary's caregiver) has sufficient training using the CGM prescribed;
- The CGM is prescribed in accordance with its FDA indications for use;
- The beneficiary meets at least one of the criteria below:
  - Is insulin-treated; or,
  - Has a history of problematic hypoglycemia with documentation of at least one of the following:
    - Two or more level 2 hypoglycemic events (glucose <54 mg/dL) that persist despite multiple modifications to the treatment or medication plan,
    - One level 3 hypoglycemic event (glucose <54 mg/dL) characterized by altered mental and/or physical state requiring third-party assistance for treatment.
  - Seen for diabetes management in past 6 months.
  - For **continuing eligibility**, all of the above must continue to be met.

# CGM – Medicare Coverage

## How to Order CGM by Brand

### Abbott Freestyle Libre 2 System

**Step 1:** Complete the [Medicare Standard Written Order](#). Please note that even though this order asks for the prescribed glucose tests per day, this is no longer a Medicare requirement.

**Step 2:** Fax the Order and chart notes to a Freestyle Libre 2 DME supplier listed on the Medicare Standard Written Order link above.

*Note:* FreeStyle Libre 2 must be used for Medicare, as the FreeStyle Libre 3 is not covered by Medicare (it does not have a separate reader as required by Medicare).

Find information at [FreeStyleFoundations.Abbott](#).

### Dexcom

**Step 1:** Complete the [Medicare Detailed Written Order](#). Check the box to order the receiver even if the patient will also use their smartphone.

**Step 2:** Fax Order and chart notes to ASPN Pharmacy: (866) 879-8150; they will help determine a participating DME supplier.

You can also find clinic resources on [Dexcom's website](#).

### Eversense

Eversense requires that the transmitter be implanted; it is recommended that you seek preauthorization for the implantation procedure before ordering.

Use the [Eversense website](#) to find information on ordering or becoming an Eversense provider.

### Medtronic CGM

Reference [Medtronic's healthcare professional website](#) for their most current resources.

MEDICARE DETAILED WRITTEN ORDER

- K0554 Receiver (Monitor), dedicated, for use with therapeutic Continuous Glucose Monitor system - 1 unit Dexcom receiver
- K0553 Supply allowance for therapeutic Continuous Glucose Monitor (CGM), includes all supplies and accessories, 1 month supply = 1 unit of service

EST. LENGTH OF NEED (# OF MONTHS): \_\_\_\_\_ ORDER DATE: \_\_\_\_\_

**PATIENT INFORMATION**

Patient Name: \_\_\_\_\_ Date Of Birth: \_\_\_\_\_

Patient Address: \_\_\_\_\_ Phone: \_\_\_\_\_

City/State/Zip: \_\_\_\_\_

Primary Insurance Name: \_\_\_\_\_ Primary Insurance Member ID: \_\_\_\_\_

Secondary Insurance Name: \_\_\_\_\_ Secondary Insurance Member ID: \_\_\_\_\_

**PHYSICIAN INFORMATION**

Physician Name: \_\_\_\_\_

Phone #: \_\_\_\_\_ Fax #: \_\_\_\_\_

Address: \_\_\_\_\_ Hospital/Clinic: \_\_\_\_\_

City/State/Zip: \_\_\_\_\_ NPI #: \_\_\_\_\_

**STATEMENT OF MEDICAL NECESSITY**

Currently on CGM Therapy?  Yes  No # SMBG \_\_\_\_\_ per day # Daily Insulin Administrations: \_\_\_\_\_

Date of Last Visit (Must be within 6 months of this order): \_\_\_\_\_ On Insulin Pump?  Yes  No

Diagnosis Code: \_\_\_\_\_ ICD-10 Code:  E10.65  E10.9  E11.9  Other \_\_\_\_\_

Frequently adjusting insulin dosage based on BGM/CGM reading:  Yes  No

This document serves as a Prescription and Statement of Medical Necessity for the above referenced patient for a Dexcom Continuous Glucose Monitoring System, Dexcom sensors, Dexcom replacement transmitter or Dexcom replacement receiver, and all associated diabetes supplies to be provided by Dexcom or an authorized distributor.

I certify that I am the physician identified on the above section and I certify that the medical necessity information contained in this document is true, accurate and complete, to the best of my knowledge.

Signature: \_\_\_\_\_ Date: \_\_\_\_\_

Please fax this form to one of the distributors listed on the other side or have a prescription sent to the patient's preferred pharmacy.

# Medicare Detailed Written Order

**Instructions**

1. Complete all fields on this Detailed Written Order.
2. Use the Noridian November 2017 Physician Resource Letter (Continuous Glucose Monitors) to confirm coverage criteria and medical necessity documentation requirements are met.
3. Fax both this order and the patient's most recent medical records that demonstrate coverage criteria are met to a DME supplier that provides the FreeStyle Libre 14 day system.

**Patient Information**

Patient Name: \_\_\_\_\_ Date of Birth: \_\_\_\_\_  
 Phone: \_\_\_\_\_ Email: \_\_\_\_\_  
 Address: \_\_\_\_\_ City: \_\_\_\_\_ State: \_\_\_\_\_ ZIP: \_\_\_\_\_

# Accreditation

 <p>JOINTLY ACCREDITED PROVIDER™ INTERPROFESSIONAL CONTINUING EDUCATION</p>	<p>In support of improving patient care, VCU Health Continuing Education is jointly accredited by the Accreditation Council for Continuing Medical Education (ACCME), the Accreditation Council for Pharmacy Education (ACPE), and the American Nurses Credentialing Center (ANCC), to provide continuing education for the healthcare team.</p>
	<p>VCU Health designates this live activity for a maximum of <b>1.00 AMA PRA Category 1 Credits™</b>. Physicians should claim only the credit commensurate with the extent of their participation in the activity.</p>
	<p>VCU Health Continuing Education designates this activity for a maximum of <b>1.00 ANCC</b> contact hours. Nurses should claim only the credit commensurate with the extent of their participation in the activity.</p>
 <p>PA AAPA CATEGORY 1 CME</p>	<p>VCU Health Continuing Education has been authorized by the American Academy of PAs (AAPA) to award AAPA Category 1 CME credit for activities planned in accordance with AAPA CME Criteria. This activity is designated for <b>1.00 AAPA Category 1 CME credits</b>. PAs should only claim credit commensurate with the extent of their participation.</p>

# Disclosure of Financial Relationships

## **Disclosure of Commercial Support:**

We acknowledge that no commercial or in-kind support was provided for this activity.

# Claiming CE Credit

## Submit Attendance

1. If you have **not participated in a VCU Health CE program in the past:**
  - a. Go to [vcu.cloud-cme.com](https://vcu.cloud-cme.com) to create an account – make sure to add your cell phone number
2. Once you have registered or if you **have participated before:**
  - a. Text the course code to (804) 625-4041.
  - b. The course code for today's event is: *within 5 days of the event* **#####**

## Complete Evaluation & Claim Credit. *(within 60 days of the event)*
