Virginia Long-Term Care Clinician Network Monthly Forum

June 19, 2024
Welcome!

As you join, please turn on cameras and mic or unmute your phone and say hello to your Virginia colleagues. We all have a common bond: the choice to serve in a unique area of health care. During the presentation we can mute ourselves until it is time for more interaction.

Please use the chat box:

- Your name and region/city/town
- Thank you for Juneteenth!
Welcome New Members!

Colleen Lobb, RNBC, WCC - Central
Bianca Ho, NP - Northern
Elizabeth Nugent, LNHA - Statewide
Kasey Maurice, NP-C - Eastern
Latoya Augustine, MSN, FNP-C, PCCN - Eastern
Shirley Sullivan, BSN, RN Consultant QIN-QIO - Eastern

For great resources: look for previous slide sets and newsletters under Forums & Events and Resources on our website.

Poll

Do you have trusted colleagues, friends or professionals you regularly go to for advice and help with your work in LTC?

A. Yes
B. No
C. Maybe
Things to share

**VAMDA 2024 Excellence in Long Term Care** conference is officially open! This year's conference promises to be a dynamic and enriching experience, and we can't wait to welcome you to Charlottesville, VA, on September 21st and 22nd.

“Just pee in the diaper” - a constructivist grounded theory study of moral distress enabling neglect in nursing homes | BMC Geriatrics (springer.com)
Poll

Have you been aware of a drug diversion in your career?

A. Yes
B. No
Older Adults with Substance Use Disorder

June 19, 2024

Mari Mackiewicz, RN, CNS, PhD
Post-doctoral Research Fellow
Virginia Commonwealth University – Affiliate
University of Chicago – Center For Health and Social Services
Background

• What is SUD?
  • Serious, disabling, chronic, and relapsing disorder.
  • There are many types!

• Among the fastest growing disorders in community dwelling older populations¹

• Older adults at higher risk
  • Disability, mortality, ER visits, hospitalizations
  • More likely to interact with clinicians, less likely to be screened
Prevalence

• Any SUD (not AUD/NUD)
• Alcohol Use Disorder (AUD)
• Cannabis Use Disorder (CUD)
• Nicotine Use Disorder (NUD)
• Opioid Use Disorder (OUD)
• Opioid Medication Misuse
• Benzo misuse
• Prescription stimulant use

- 9-10%
- 20-30%
- 1-3%
- 20-30
- .05-1%
- 8-11%
- 1-3%
- 1-2%
Long-term Care and SUD

• Long-term care
  • Multiple medical conditions, chronic pain, polypharmacy\(^2\)
  • Mental health conditions, dementias
• Cohort of SUD in older populations
  • Early onset
  • Maladaptive coping mechanisms
• Undertreated SUD presenting themselves
• Ethical considerations
  • Legal framework, public health, human rights, duty to employees, decision-making capacity
Special Populations Considerations

- Advanced dementia in LTC – substance use contributes to QOL
  - Efforts to control amount of use
- OAs (general) LTC – medication misuse more common
  - Consider medication tapering
- OAs in post-acute care – pre-existing SUD, may experience withdrawal
Medication Misuse (MM)

- High prevalence of psychotropic drugs (NH: 52-80%, ALF: 53-68%) ³

- Opioids

- Benzodiazepines (lorazepam, diazepam, alprazolam)

- Z-drugs (zolpidem, zaleplon, eszopiclone)

- Stimulants (methylphenidate)

- Miscellaneous (sedating medications)
Goals of Prevention

• Prevent medication misuse
• Prevent development of SUD
• Prevent OD death
• Prevent SUD progression
• Prevent relapse
• Prevent complications due to SUD

HARM REDUCTION!
Prevention and Treatment

- Prevention strategies
- Routine screening**
- Brief intervention
- Substance withdrawal management
- Medications for Opioid Use Disorder (MOUD)
- Psychosocial interventions
  - Strength-based, age and culturally appropriate, individualized
Prevention

- Assess patients on opioids for pain control
- Stop-date for opioid use
- Medical directors provide guidance to those with high opioid prescription rates (non-cancer treatment)
- Evaluate drug regimen
- Manage physical/mental health conditions
- Staff education on stigma
- Prescribe naloxone with opioids
- Offer opioid tapers as appropriate
Screening

• Annually, with major life transitions
• SUD & MM should be considered as differential diagnosis
  • Delirium, falls, and/or agitation
  • If past history of SUD – consider potential cause of poor response to medical treatment
• Precipitating factors? Comorbid mental health conditions?
• Request to obtain info from family, etc.
• DSM 5 criteria
• Remember prescription medications
• NIDA quick screen, AUDIT-C, Opioid Risk Tool (ORT)
• Urine screen
Team-based approach

• RN (intake) – screening
• PCP – review screen, inform social worker, brief intervention, treatment/referrals as needed
• Social worker – resources, social engagement, coordinates psychosocial support as needed
• Nurse – education, monitor for use/withdrawals
• PCP – monitoring, treatment, coordinating care
• Pharmacist
• Psychiatrist
• PRS – education, social support, praise, problem solve, family support
Treatment

• Abstinence vs. reduction
• Psychosocial + withdrawal management + pharmacologic
  • Education
  • MI
  • Counseling
  • Group therapy
  • Mutual aide
• Challenge with typical treatment centers
• Pharmacotherapy
  • Low and slow
  • Methadone versus Buprenorphine, & Naltrexone
Treatment Barriers

• Resist asking for help
• Stigma (addict, old)
• Transportation
• Lack support or motivation
• Providers less likely to refer
• Gaps in substance use, aging, and mental health services
• Knowledge, misconceptions
Special Considerations for Older Adults in LTC

- Importance of pain management
  - Long-term opioid therapy (LTOT), dependence vs. addiction
- Alcohol use (side effects)
- Nicotine use
- Cannabis use
- Long-term benzodiazepine use
- Co-occurring mental health
Case Study

A 74-year-old male with a history of hypertension, diabetes and OUD was brought to the ED after being found on the floor of his apartment after a fall. His exam was notable for right upper extremity median nerve palsy, inability to stand, and penile wounds secondary to urinary incontinence. Lab results demonstrated rhabdomyolysis and urine toxicology positive for fentanyl. Substance history included eight prior opioid overdoses in the past two years, with last heroin use one week prior. He declined evaluation by the inpatient OUD service. The Clinical Opiate Withdrawal Scale (COWS) score remained unremarkable and he was transferred to a skilled nursing facility (SNF). On admission to the SNF he was unable to sit up unassisted and exhibited functional incontinence, low mood and energy levels which impeded progress with therapy services. The patient eventually agreed to starting buprenorphine-naloxone (8-2mg) BID and counseling services. By week three, he had improvements in mood, energy level and appetite, regaining 18 lbs. Although his right upper extremity remained weak, the patient regained continence, his penile wound healed and he was able to stand and ambulate unassisted.

In support of improving patient care, VCU Health Continuing Education is jointly accredited by the Accreditation Council for Continuing Medical Education (ACCME), the Accreditation Council for Pharmacy Education (ACPE), and the American Nurses Credentialing Center (ANCC), to provide continuing education for the healthcare team.

VCU Health designates this live activity for a maximum of 1.00 AMA PRA Category 1 Credits™. Physicians should claim only the credit commensurate with the extent of their participation in the activity.

VCU Health Continuing Education designates this activity for a maximum of 1.00 ANCC contact hours. Nurses should claim only the credit commensurate with the extent of their participation in the activity.

VCU Health Continuing Education has been authorized by the American Academy of PAs (AAPA) to award AAPA Category 1 CME credit for activities planned in accordance with AAPA CME Criteria. This activity is designated for 1.00 AAPA Category 1 CME credits. PAs should only claim credit commensurate with the extent of their participation.
Disclosure of Financial Relationships

Disclosure of Commercial Support:
We acknowledge that no commercial or in-kind support was provided for this activity.
Claiming CE Credit

Submit Attendance

1. If you have not participated in a VCU Health CE program in the past:
   a. Go to vcu.cloud-cme.com to create an account – make sure to add your cell phone number
2. Once you have registered or if you have participated before:
   a. Text the course code to (804) 625-4041.
   b. The course code for today’s event is: ##### (within 5 days of the event)

Complete Evaluation & Claim Credit, (within 60 days of the event)

1) Go to https://vcu.cloud-cme.com
2) Sign in using email address used above
3) Click “My CE”
4) Click “Evaluations and Certificates”

OR

1) Open the CloudCME app on your device
2) Click “My Evaluations”
3) Click the name of the activity to complete evaluation
